SUMMARY

Full-Stack .NET & Angular Developer with a solid foundation in building end-to-end web apps. Specialized in robust backend systems using ASP.NET Core and Clean Architecture, paired with modular Angular frontends. A proactive problem-solver ready to deliver clean, scalable, and testable code.

EDUCATION

Bachelor of Engineering – Computer and Systems Engineering
Zagazig University | Graduated: 2026

TECHNICAL SKILLS

Backend: C#, ASP.NET Core Web API, Entity Framework Core, REST APIs, ASP.NET Identity, JWT Authentication, Role-Based Authorization, ASP.NET Identity, Middleware, Clean Architecture, DDD, CQRS, MediatR, SignalR, FluentValidation, Background Services, Caching, Dependency Injection, Unit & Integration Testing.

Frontend: Angular, TypeScript, JavaScript, HTML, CSS, Bootstrap, Tailwind CSS.

Database: SQL, T-SQL, ADO.NET, MongoDB, Database Design, Query Optimization.

Tools: Git, GitHub, Docker, Postman, Swagger, CI/CD basics.

Concepts: OOP, SOLID Principles, Design Patterns, Clean Code, Problem Solving, Agile.

SELECTED PROJECTS

Shora – Full-Stack Booking Platform

[Live Production](#) [GitHub](#)

Full-stack booking platform for one-to-one consulting sessions with availability management, manual payment verification, client bookings, and admin operations.

Tech Stack: ASP.NET Core, Angular, PostgreSQL, EF Core, JWT, ASP.NET Identity, Azure Blob Storage, Docker, xUnit, Testcontainers, GitHub Actions.

Key Highlights

- Built a full-stack application using ASP.NET Core Web API, Angular, and Clean Architecture with clear separation of concerns.
- Implemented secure JWT authentication, refresh-token rotation, email verification, password reset, and role-based authorization.
- Designed booking and payment workflows with slot reservation, payment approval, cancellations, refunds, receipt validation, and automated background processing.
- Added production-ready infrastructure including transactional Outbox, caching, rate limiting, Azure Blob Storage/SAS URLs, xUnit/Testcontainers testing, Docker, and GitHub Actions CI/CD.

MechanicShop – Backend REST API

[GitHub](#)

Backend system for managing mechanic shop operations (work orders, scheduling, customers, invoicing).

Tech Stack: ASP.NET Core, EF Core, SQL Server, CQRS (MediatR), JWT, Docker, xUnit.

Key Highlights

- Built REST API using ASP.NET Core with Clean Architecture + CQRS (MediatR)
- Implemented JWT authentication (refresh tokens) + role-based authorization
- Added background services, caching, rate limiting, and structured logging
- Implemented unit & integration testing (xUnit + Testcontainers)
- Dockerized application for deployment
